

Skills Covered:

- Integrating health and safety procedures into workplace practices when carrying out work on traction line networks.
- Applying knowledge of codes of practice, industry standards and operating procedures, and complying with asset-owner requirements when installing, maintaining or repairing traction line networks.

Entry Requirements:

The learner must be employed in the traction line industry and exposed to the relevant skills covered. It is recommended the learner also hold the New Zealand Certificate in Electricity Supply (Introductory) (Level 2), before being signed up to this qualification.

Modes of Delivery:

This programme is assessed on-job and is completed through workbooks. It can also be achieved through Advanced Portfolio Assessment (APA). If the learner has a minimum of 4 years experience working in the industry, and can provide a portfolio of evidence from the past 24 months linking to the level of this programme's unit standards, then APA could be a great option to recognise existing skills.

Progression Pathways:

Graduates will be qualified work as a Traction Line Mechanic, and will be able to operate under limited supervision. This programme leads towards eligibility for registration by the Electrical Workers Registration Board (EWRB).
