MICRO-CREDENTIAL IN

CCTV Inspection of Water Services Assets

On the lookout to take your industry training to the next level?

This micro-credential (MC) is for people who inspect and maintain pipe systems, pumping systems, and components that contribute to collecting and disposing of wastewater and stormwater.

Skills Covered

This MC covers the operational knowledge and skills required to use closed-circuit television (CCTV) to inspect and report on non-pressure water services assets, that include the following:

- The role of CCTV in the management of non-pressure water services assets.
- Procedures for survey of assets, including how to prepare assets.
- Safe practice, selection and set up of CCTV equipment.
- Inspection of non-pressure water services assets.
- Identification of pipe defects and features.
- Recording of information from CCTV inspection.

Entry Requirements

The learner must be employed and be exposed to the relevant skills covered.

Modes of Delivery

MCs are short, NZQA-recognised training programmes with fewer credits than a qualification (between 5 and 40). They either lead into a qualification or focus on specialised skills and knowledge, that top up a full qualification certificate, or apprenticeship programme. It takes around 2 months to complete this programme. Achievement is through on-job assessment and is completed through workbooks.

Progression Pathways

Graduates who hold this MC will have the proven skills and knowledge to:

- carry out the best and safest practice when selecting and setting up CCTV equipment
- describe the role of CCTV in the management of non-pressure water services assets
- identify pipe defects and features, and inspect and record information from the inspections.
